OBJECTIVE

Targeting a challenging Data Engineer role to leverage expertise in designing, developing, and optimizing end-to-end ETL pipelines, cloud-based data architectures, and automated workflow using Azure, PySpark, and Databricks, with a focus on data security, scalability, and operational efficiency.

CORE COMPETENCIES

- Data Engineering
- ETL
- Data Warehousing
- Cloud Data Architecture
- Data Pipeline Orchestration
- Data Automation
- SQL & Database Optimization
- Data Security & Compliance
- Azure Data Lake
- Big Data
- Multi-Cloud Integration

EDUCATION

- Bachelor of Science (Honours) in Computer Science from Brock University, St. Catharines, Canada in 2023

TECHNICAL SKILLS

- **Cloud & Data Platforms:** Azure (Data Factory, Databricks, Data Lake, SQL, DevOps), GCP, Snowflake, CosmosDB, MongoDB
- **ETL & Data Engineering:** Azure Data Factory, Talend, PySpark/Apache Spark, Apache Kafka, Airflow, OLAP
- **Databases & Query Languages:** SQL Server, PostgreSQL, SQL
- **Programming & Analytics:** Python, Power BI
- **Collaboration & Tools:** GitHub, JIRA, Confluence, Unity ADF

CERTIFICATIONS

- DP-700 Microsoft Fabric Data Engineer Associate
- DP-900 Microsoft Certified: Azure Data Fundamentals
- Google Data analytics

PROFILE SUMMARY

- **Nearly 2 year of hands-on internship experience** in designing, developing, and deploying end-to-end data solutions on Microsoft Azure, focusing on scalability, performance, and security.
- **Skilled in Azure, GCP, and multi-cloud architectures**, implementing automated auditing, ETL pipelines, and secure data workflow.
- **Proven track record in optimizing Azure Data Factory pipelines**, reducing manual interventions by 40%, and enhancing ETL efficiency by 30%.
- **Strong experience in implementing data security, access controls, and compliance measures** across Azure SQL, Cosmos DB, and Snowflake environments, achieving 100% regulatory compliance.
- **Skilled at building automated, end-to-end data processing workflow** integrating modern tools like PySpark, Databricks, n8n webhooks, and OneDrive, enabling seamless operational efficiency and cost savings.

WORK EXPERIENCE

Mar'24 – Till Now | Data Engineer Intern | Vosyn, Canada

Key Highlights:

- Designed a secure on-prem LLM server architecture with VPN/Zero-Trust remote access & automated end-to-end workflow routing outputs to OneDrive, cloud, & internal systems, ensuring scalability and security.
- Developed a multi-cloud (GCP & Azure) auditing platform automating extraction of IAM policies, audit logs, SQL logs, firewall rules, and VM logs, performing rule-based compliance checks via Python, BigQuery, Cloud Logging, and SharePoint/OneDrive integration.
- Built and optimized ETL pipelines using Azure Data Factory to extract, transform, and load data from multiple sources into Azure Blob Storage and ADLS.
- Designed and maintained large-scale data processing workflow with Azure Databricks and PySpark, enabling efficient data transformation and analytics.
- Implemented data security and access controls for Azure SQL Database and Cosmos DB, ensuring compliance with organizational and regulatory standards.
- Conducted performance monitoring and optimization of Snowflake warehouses, including workload management, query tuning, and resource scaling for cost-effective operations.
- Leveraged Azure Synapse Analytics for data warehousing solutions, including modeling, partitioning, and indexing, improving query performance and data accessibility.
- Automated and monitored data integration workflow using Python, Azure Data Factory, Databricks, and Azure Monitor, reducing manual effort while ensuring high availability, reliability, & operational efficiency.

Key Achievements:

- Increased ETL efficiency by 30% through streamlining and enhancing Azure Data Factory pipelines.
- Reduced manual interventions by 40% by implementing automated workflow using Python scripts.
- Achieved 100% compliance with data protection regulations by enforcing robust security measures across data systems.
- Implemented automated data quality checks across ETL pipelines, ensuring accuracy and consistency, reducing errors by 45%.
- Integrated real-time monitoring and alerting for cloud data pipelines, improving issue detection and resolution time by 60%.
- Optimized compute and storage costs across cloud platforms by tuning pipelines and scaling resources dynamically, saving 30% in operational costs.
- Developed custom dashboards and reporting scripts to track ETL performance and pipeline health, enabling data-driven decisions.
- Enhanced data lineage and metadata management to support governance, audit, and compliance, improving visibility by 50%.
