SUMMARY

I am a highly motivated Azure Data Engineer graduated from Brock University, Canada with over a year of experience in designing, developing, and deploying data solutions on the Microsoft Azure platform. I have a proven ability to leverage various Azure services to build scalable data architectures, and I am skilled in implementing data governance measures. My background in data processing and strong programming skills enable me to create efficient data workflows and optimize performance

EXPERIENCE

Data Engineer Intern

Vosyn

03/2024 Canada

Data Engineer Intern

- Designing a secure networking architecture for a **self-hosted on-prem LLM server**, including **remote access setup** (VPN/Zero-Trust), pre-deployment configuration, and an end-to-end workflow where the LLM sends outputs to an **n8n webhook** for routing to OneDrive, cloud, and internal systems—focusing on security, scalability, and seamless integration.
- Built a **Google Cloud Auditor Platform** (multi-cloud GCP + Azure) that automatically extracts **IAM policies, audit logs, SQL logs, firewall rules, VM logs**, and performs rule-based compliance checks using Python, BigQuery, Cloud Logging, and SharePoint/OneDrive integration.
- Designed and implemented data ingestion pipelines using *Azure Data Factory* to extract, transform, and load (ETL) data from various sources into **Azure Blob Storage** and **Azure Data Lake Storage (ADLS)**.
- Developed and maintained data processing workflows using *Azure, Databricks* and **PySpark** to handle large-scale data transformations and analytics tasks efficiently.
- Implemented data security and access controls for **Azure SQL Database** and **Azure Cosmos DB** ensuring compliance with regulatory and organizational security requirements.
- Conducted performance monitoring and tuning of Snowflake data warehouses, including workload management, query optimization, and resource scaling, to achieve optimal performance and cost-effectiveness
- Orchestrated end-to-end ETL pipelines using PySpark and Snowflake to extract data from various sources, transform it according to business logic, and load it into data warehouse
- Utilized Azure Synapse Analytics for building and optimizing data warehousing solutions, including data modeling, partitioning, and indexing for improved query performance
- Automated data integration workflows using **Python, Azure Data Factory pipelines**, and Databricks scripts to reduce manual effort and enhance operational efficiency.
- Monitored and optimized data pipelines and storage solutions using Azure Monitor, ensuring high availability, performance, and reliability of data services

EDUCATION

Bachelors of Science (Honours)

Brock University

09/2019 - 12/2023 St. Catharines, Canada

CERTIFICATION

DP-700: Microsoft Fabric Data Engineer Associate

DP-900: Microsoft Certified: Azure Data Fundamentals

Google Data analytics

SKILLS

Azure	ETL	Databricks	GitHub
PySpark	Azure Data Factory		
Azure Databricks	Unity	ADF	
Azure Data Lake	JIRA	Azure SQL	
Python	SQL	Agile	Snowflake
Confluence	Microsoft Power BI		
CosmosDB	Talend	ETL Pipelines	
Azure Devops	Apache Spark		
Apache Kafka	MongoDB		
Microsoft SQL Server	Airflow		
PostgreSQL	OLAP	GCP	

KEY ACHIEVEMENTS

- Enhanced ETL Efficiency**
Achieved 30% increase in ETL efficiency with optimized Azure Data Factory pipelines.
- Automated Data Workflows**
Reduced manual interventions by 40% through automation of data workflows via Python scripts.
- Ensured Data Compliance**
Implemented security measures ensuring 100% compliance with data protection regulations.
